

## Kim's Document Assembly redefines document creation

### Create complex documents in minutes

**Atlanta, August 21, 2023:** Kim ([www.kimdocument.com](http://www.kimdocument.com)), the no-code, SaaS, patent-protected document generation, assembly, and workflow automation platform, today announced the latest enhancement to Kim Document by adding no-code document assembly functionality. This addition, brought into the product from Kim's Enterprise solution, empowers users to effortlessly create complex documents using common, centrally held, and reusable content from the content and clause libraries managed within Kim Document.

With document assembly, users can harness simple logic rules defined in Kim's intuitive no-code authoring tool. This feature empowers users to define rules with ease using familiar logic operations, including "less than", "greater than", "equals", "contains", and more.

Once a rule is met, Kim's dynamic system executes a configured action that can replace, delete, insert, append, or pre-append content from the extensive content and clause Libraries. This seamless integration ensures that users can access frequently used content quickly, enhancing consistency and efficiency across all documents.

The content & clause libraries house frequently used and reusable content, ensuring consistency and accuracy across all assembled documents. Moreover, content and clauses can include tagged elements, making it possible to customize content based on answers from a form-based questionnaire.

"We are delighted to introduce document assembly to customers of Kim Document," said **Karl Chapman, CEO of Kim**. "This game-changing feature, which has been in our enterprise solution since 2016, exemplifies our commitment to commoditizing document creation by providing users with low-cost, globally proven tools that simplify their workflows and increase productivity."

Document assembly enhances how businesses and individuals create documents, making it easier and more efficient than ever before. Whether assembling contracts, agreements, or any other document, Kim's new feature sets a new standard for simplicity, speed, and accuracy.

### About Kim

Kim is a no-code, SaaS, patent-protected document generation, assembly and workflow automation tool. Kim's Enterprise solution is proven with Fortune 500 organizations in legal, compliance, contract management, company secretarial, office productivity and other functions.

Kim's Business tier allows any function or role in small, medium or large organizations to take their existing Word documents and automate them plus turn them into web applications that can be shared internally and/or externally. It automates letters, forms, records, checklists and contracts in minutes, with no training, integrates seamlessly with MS Teams, and is accessible from any browser.

Kim has two patents. When a DOCX template is uploaded into the Kim software it gains additional knowledge by learning the structural composition of each template and it can interface with any authenticated and authorized client over HTTPS with an intelligent understanding of the correctness

# NEWS RELEASE

of the data being supplied. This enables the automatic extraction of tags from the multiple sample documents, the storing of the tags in a data schema separate from the documents, automatically generating structural schemes from the tags, automatically creating document templates from the sample documents and processing the document templates to create unique identifiers (see 'Patent Headlines' section and the Kim patent: <https://patents.justia.com/patent/10817662>).
